EDUCATION

University of Illinois Urbana-Champaign

Master of Engineering in Autonomy and Robotics

Urbana, IL

Aug 2024 - present

BS Abdur Rahman Crescent Institute of Technology

Bachelor of Engineering in Electrical and Communication Engineering

Chennai, India

Jul 2017 - Jun 2021

TECHNICAL SKILLS

Programming Languages : Python, C++, Bash, PowerShell, LabView, Matlab, Azure CLI

Technologies/Frameworks : Pytorch, Open CV, ROS, ROS2, Docker, Anaconda , NVIDIA Jetson, GEMStack, F1Tenth, Azure, Gazebo Classic, Gazebo Ignition, Unity, Git, Azure ADO, YOLO, Open AI Gym

Coursework : Principles of Safe Autonomy, Deep Learning with Computer Vision, Autonomous Vehicle System Engineering.

WORK EXPERIENCE

UIUC Research Lab

Research Intern at McKechnie Family LIFE Home

Champaign, IL

Jan 2025 - present

- Developing interactive demos for researchers to showcase **STRETCH robot** capabilities in assisting the elderly with household tasks in an **IoT-enabled** home using a combination of **NLP and deep learning models**.
- Designing strategies for **distributed autonomous system coordination** to optimize task efficiency.

Accenture

Azure DevOps Engineer, Full Stack Engineering Senior Analyst

India

Aug 2021 - Jul 2024

- Led deployment and testing of **cognitive vision models** on **IoT edge servers** at Microsoft Datacenters globally along side of Azure Cognitive services development team.
- Led **automation development** in the project, implementing Azure Runbooks for password rotation, vulnerability fixes and maintenance for cloud infrastructure and BareMetal physical servers. **Reducing manual hours spent by 90%**.

Nokia

Embedded System Engineer, Intern

India

Feb 2021 - May 2021

- Developed an **IoT device** to detect obstacles blocking accessibility of fire extinguishers and alert security for Nokia's Manufacturing Factory as part of their safety measures.

PROJECTS

LiDAR + Camera Based Navigation for Unpredictable Lighting Scenarios 🔗

ROS, Python, Open CV, NVIDIA Jetson, F1 Tenth, Unity

- Designed and implemented a lane detection algorithm using **OpenCV** on **Nvidia Jetson**, incorporating techniques such as down-scaling, resizing, color thresholding, and pixel intensity histograms.
- Achieved an **30% increase in computational speed** compared to traditional methods, enabling **real-time waypoint generation** in the F1TENTH/AutoDRIVE simulator.
- Developed a robust switching mechanism between **camera-based error generation** and **LIDAR-based error generation** to handle low-light conditions, such as tunnels.
- Customized an open-source simulator using Unity to develop a **digital twin** of the lab environment and the F1TENTH car.

Contour-Based Image Drawing with UR3 Arm 🔗

ROS, Python, Open CV, UR3 Arm

- Developed a system to process and draw **any image** that is obtained from the internet using the **UR3 arm**.
- Designed an algorithm with **OpenCV** to detect **contours** from digital images, fine-tuned to **retain key features** and reduce waypoints for **faster drawing speed**. **Reducing time taken by 83%**.
- Converted pixel-based waypoints into real-world coordinates and applied **inverse kinematics** to accurately replicate the image with the UR3 arm.

Pedestrian State Estimation And Velocity Prediction Using Sensor Fusion

PyTorch, ROS, Python, Open CV, YOLO, GEMStack

- Designing an algorithm to **track pedestrian state** and velocity using **multi camera** and **LIDAR data** from **GEM e4** vehicle.
- Aim to achieve pedestrian detection with 100 Hz frequency and expand to include bicyclists and vehicles.

Customized Object Detection using pre trained Neural Network models 🔗

PyTorch, Python, Open CV, CNN

- Customized a pre-trained ResNet50 Convolutional Neural Network model to detect breeds of cats and dogs. The dataset used was the Oxford-IIT Pet dataset, which was modified by **adding 7 more dog breeds**.
- The model was customized using the fast.ai deep learning library and **achieved 91% accuracy**.
